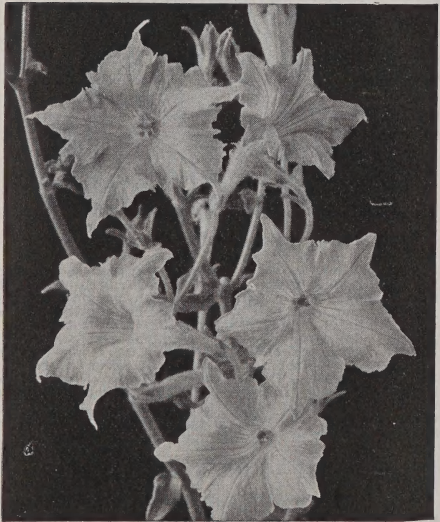
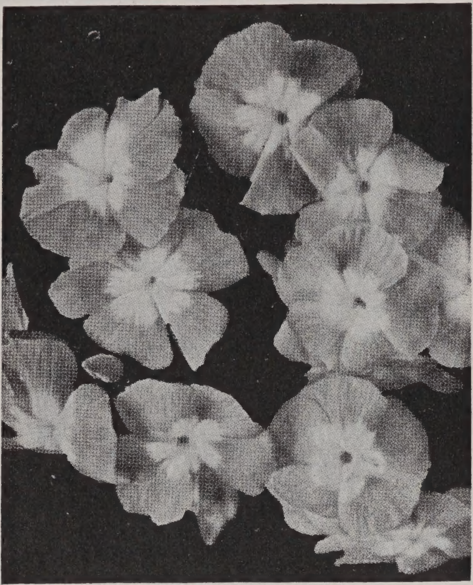
NEW EXQUISITE FLOWER NOVELTIES

Petunia—Glow

Is a dwarf compact, ball-shaped of bright rose red with lighter throat. Extremely free flowering all season, of true rich coloring and a wonderful variety for the garden. **Pkt., 25c; 2 pkts., 40c.**



PETUNIA HOLLYWOOD STAR
All-America Selections Silver Medal



PHLOX

Gigantea Salmon Glory

For years we have been working to procure a good salmon Phlox. We now take pleasure in offering Salmon Glory. The individual florets are gigantic for Phlox, measuring from 1¼ to 1½ inches in diameter. The color is a pure salmon-pink with a distinct creamy-white eye. This combination with its clear, clean, crisp appearance, makes one of the most beautiful color combinations we have ever seen. Salmon Glory is one of the outstanding novelties of the year, if not the best. Hardy Annual. **Pkt., 25c; 2 ukts., 40c.**

Petunia—Salmon Supreme

Winner-Highest All America Award

An entirely new color in petunias. The flowers when first opening are of a rich coral salmon, changing as they mature to a glistening soft salmon pink. They grow two inches and are deeply five-lobed. The plants present a pleasing appearance and have a nicely rounded form which is retained throughout the season. They have a uniform height of about one foot and a spread of about one and one-half feet, blooms profusely. **Pkt., 25c; 2 pkts., 40c.**

Petunia—Hollywood Star

This Is a Beautiful New Petunia

The color is a charming shade of rich rose with an amber throat. This Petunia is unique in the form of its flowers which consists of a fine pointed star. It is a fine garden variety as it is early and free blooming and the strong, vigorous plants are so smothered with blooms that hardly any foliage shows. A real novelty. **Pkt. 25c., 2 pkts., 40c.**

NEW FLOWER SEED NOVELTIES

WE OFFER a wonderful list of beautiful new novelties. They will add new beauty, new colors to your garden. You will enjoy watching the development of some flowers you have never seen before. Select now the varieties you want and order promptly before the supply is exhausted.

Calendula—Orange Shaggy

In Calendulas "Shaggy" is probably the most distinct. The closely set, irregularly placed, long narrow petals are beautifully fringed or laciniated, giving the flowers the frilled or shaggy appearance of some Chrysanthemums. The large, flat, rich orange flowers shade slightly towards the medium closed center, the two-tone coloring being quite effective. Flowers are freely borne on long stems.

We feel sure "Orange Shaggy" will prove a welcome addition to the Calendula class either as a garden plant or as a cut flower. **Pkt., 10c; ¼-oz., 25c; ½-oz., 40c.**

Calendula—Chrysantha or Sunshine

This valuable addition is distinctly different in flower form. It has wide petals, loosely arranged, incurved at center and reflexed at edges, somewhat like a Chrysanthemum. Flowers four inches across are clear buttercup yellow on long stems for cutting, about 30 inches tall. **Pkt., 10c; ¼-oz., 30c; ½-oz., 50c.**

SCABIOSA

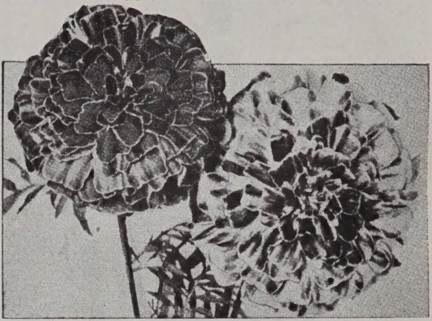
Imperial Giant Blue Moon

The flowers are entirely different from the old varieties of Scabiosa. The flowers are composed entirely of broad, heavy, wavy petals. In other words, the flowers are fully double and are extremely large and deep, 2 3/4 inches across and 2 inches deep. The color is a rich, deep Lavender Blue. Blue Moon is ideal for cutting because of the stem length, fully 27 inches and especially because the large, beautifully shaped flowers are such a lucious shade of deep lavender blue, so hard to find in annual flowers. **Pkt., 15c; 2 pkts., 25c; ⅛ oz., 60c.**

SEMESAN

Place a little Semesan with seeds in a jar and shake vigorously; bacteria and fungus adhering to the seeds will be killed. **⅛-oz., Pkt. 10c; 2 ozs., 35c.**

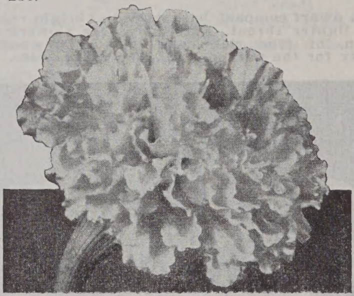
BEAUTIFY YOUR GARDEN WITH THESE NOVELTIES AND SPECIALTIES



MARIGOLD

The New Red and Gold Hybrids

Large extremely double flowers, 2½ to 3 inches across, nearly three times the size of the largest double French Marigolds. The earliest of all Marigolds. The loveliest colored and most outstanding. In addition to the solid red with a brilliance never before seen in Marigolds, there are delightful combinations of red and gold, varying in color according to season and in different flowers on the same plant at the same time from almost pure golden yellow to bright rich mahogany scarlet. Continuous blooming until frozen. The faintly fragrant flowers last two to three weeks either on the plants or in cut bouquets. Plants 1½ feet tall, 2 feet across—a real novelty. **Pkt., 10c; Large Pkt., 25c.**



Marigold—Yellow Supreme

Visualize, if you can, a large, fluffy, well-rounded bloom of delicately mild honey fragrance, with broad, loose, frilled petals of a rich, creamy lemon-yellow color, and you have a fair conception of the new "Yellow Supreme" Marigold. You'll truly enjoy its dazzling beauty. Unsurpassed as a cut flower. Holds decided freshness fully a week to 10 days. In water it takes on an even more delightful color. Plants are vigorous and free branching with foliage which is practically free from that objectionable Marigold odor. For a real thrill grow it this year. You will have a delightful surprise. **Pkt., 10c; ⅛-oz., 25c; ¼-oz., 40c.**

MARIGOLD—SUNSET GIANTS MIXED

The flowers are the largest known in the Marigold group, 5 to 7½ inches in diameter, the great profusion of flowers makes the showiest spot in the garden. But most remarkable, instead of the usual Marigold odor these flowers have a definitely sweet fragrance. The flowers are loosely formed, with broad petals. The Sunset Giants mixture ranging from deep orange, golden orange, light yellow, lemon yellow and primrose. Sunset Giants are wonderful for cut flowers in the home. **Pkt., 10c; ⅛-oz., 25c; ¼-oz., 40c.**

NEW SWEET PEAS

Three Beautiful Varieties

LIFE

Is a new Scarlet Cerise Sweet Pea that is different to all other varieties. Life is the brightest and most pleasing of all because of the salmon shading which permeates the color. The name was suggested by the brilliance and sparkle of the coloring. Life does not fade or burn in the strongest sunshine. A strong grower and extremely free flowering. The flowers are bold on long, strong stems. Experts say LIFE is a wonderful SWEET PEA. Pkt., 15c; ½-oz., 25c; oz., 40c.

BRIDAL VEIL

"THE FIRST REAL WHITE SWEET PEA"

This is rather a startling statement but when compared with all other White Sweet Peas, "Bridal Veil" stands out sharply and clearly. It is a pure-clear white of stately magnificence. Bridal Veil is a black seeded white, so is less liable to rot. One is immediately impressed because the giant flowers are so beautifully frilled and graceful. Many of the flowers are duplexed or ruffled and five handsome flowers to each stem is not unusual. Pkt., 15c; ½-oz., 25c; oz., 40c.

Lady MacBeth

Lady MacBeth is a new and distinct color. It is a dazzling spinel red with golden salmon shading which makes this variety outstanding. The flower is massive and beautifully waved, nicely spread wings and will not sunburn. A strong vigorous grower, producing long stems with four and five mammoth flowers. **Pkt., 10c; ½-oz., 20c; oz., 30c.**

Sweet Pea Novelties

Gloaming. Is the finest light salmon pink with cream ground. Gloaming throws large duplexed flowers on pencil stems and usually four flowers to a stem. The flowers have a delightful wavy form that enables one to gather the most beautiful bouquet imaginable. **Pkt. (about 30 seeds) 25c.**

Sterling. Is a large duplexed salmon rose and very vigorous, an abundant array of four and five graceful duplexed flowers on strong stems. Each flower is beautifully formed and of self color having a trace of silver in it's base, really beautiful. **Pkt. (about 30 seeds) 25c.**

Crony. An exhibition Sweet Pea of first rank, large flowers on long stems, tinted a soft golden salmon. CRONY is a very strong grower and ideal for the home garden. CRONY received the Award of Merit at the Scottish Sweet Pea Trials. **Pkt. (about 30 seeds), 25c.**

VEGETABLE NOVELTIES

ASPARAGUS—PARADISE

New, Sensational, Matures 1 Year Earlier, Exceptional Quality

This new Sensational Early Maturing Variety produces a normal crop one year earlier than any other variety. Those who have seen this asparagus growing have been amazed to see the straight, crisp, large stalks that were produced from seed planted only TWO YEARS BEFORE. An exceptionally strong, vigorous producer. Some growers say it produces twice the crop of ordinary asparagus. ..Only six to eight stalks needed to make a pound. This variety is rust resistant. Another distinct advantage is because it retains its fresh flavor. Because it brings returns one year earlier than other varieties and because of its great size, large crop and fine, mild flavor, this NEW VARIETY will quickly supersede all others. A new, better variety that will take the country by storm. An excellent variety for home gardens and market gardeners.

EAT WHEN YOUNG DIRECT FROM YOUR OWN GARDEN

HOW TO PLANT—The soil should be rich and deeply plowed. Sow in rows 14 to 20 inches apart and about 1 to 1¼ inches deep. As soon as the plants have the fifth and sixth leaf, thin to one plant each 3 inches apart. Then irrigate. Cultivate often and do not water again until absolutely necessary as the soil will dry from the surface down and the top roots will follow. Cultivate once a week for best results. Keep clean and remember that cultivation is the next thing necessary after the best seeds and the two are necessary for success. **(One ounce to 100 feet of drill, 5 to 6 lbs. per acre, in drills; 15 to 20 lbs., to the acre broadcast.)**

Asparagus

Ger.—Spargel. **Scand.—Asparges.**

1 oz. to 50 feet of drill—5 lbs. to the acre

Asparagus

Cover the soil 4 to 5 inches deep with well rotted manure and disc well — then plow as deep as possible and harrow. Turn furrows 5 feet apart, about 6 inches deep. Place plants in rows about 18 inches apart, with roots well spread out. Turn a light furrow back over them and level by cross harrowing.

THE SEVEN BEST VARIETIES OF SWEET CORN FOR MONTANA AND THE NORTHWEST

One pound for 100 hills or 150 to 200 feet of drill; 15 pounds to acre; 1 pound is a little more than a pint; 2 pounds a little more than a quart.

Sweet Corn is very sensitive to frost and should not be planted until danger from freezing is past or about the middle of May in Montana. A rich, warm, good ordinary soil will raise excellent Sweet Corn, if it is deeply and horoughly worked before planting. If planted in rows, make the rows three feet apart and 12 to 16 inches apart in the row; cover one inch deep with fine soil firmly pressed down. If planted in hills, make the hills three feet apart each way, and plant four to six kernels to the hill. Hoe frequently and when six inches high cut off all the suckers so as to leave three or four plants to the hill; do not let the plants overcrowd. Give fre-quent and thorough but shallow cultivation until the tassels appear. In cooking Corn use boiling water; do not cover the vessel and do not cook more than ten minutes. "Use no salt"—a pinch of sugar will add to the natural sweetness.

EXTRA EARLY VARIETIES

Golden Gem—Earlier than any other Sweet Corn of the Golden Bantam varieties. The stalks are dwarf, 2 to 3 ears on a stalk, average ear 6 inches in length and eight rowed, kernals are quite deep, meaty, rich golden yellow, very tender and of the sweetest and most sugary flavor imaginable. Very valuable to the market gardener and home gardener where late corns will not mature. 60 days. **Pkt., 5c; ½-lb., 20c; 1 lb., 35c; 2 lbs., 60c; 5 lbs., $1.25.**

LETTUCE

EVERY GARDEN CAN GROW THIS FINEST OF HEALTH FOODS

(¼-ounce to 100 feet of drill — [illegible] pounds to the acre)

Culture—For the earliest lettuce sow seed of the loose leaved varieties. Sow thinly and when the young seedlings are large enough for the table they may be thinned as used. In this way space is provided for normal growth. For succession sow every two weeks.

The conditions necessary to grow good head lettuce are rich soil, plenty of moisture, and steady growth until the heads are ready to use. A check in growth from lack of nourishment or moisture usually means no heads. Seed may be sown in boxes indoors or in the hot bed and set out as soon [illegible] weather permits, or sowing may be made in the open ground as soon as soil and weather conditions are favorable. Do not cover seed more than ¼ to ½ inch deep. The plants should be thinned to 10 inches apart in the row, a light application of fertilizer such as nitrate of soda used after the plants have made some growth will be found beneficial. All our varieties of lettuce are excellent for the home garden.

By using the various classes of Peas and making several sowings of each, good Peas can be had for a long season. The pods should be kept picked; the plant will then continue to bear longer. A good Pea for the market grower or the home garden. 65 days. **Pkt., 5c; ½-lb., 25c; 1 lb., 35c; 2 lbs., 60c; 5 lbs., $1.25.**

Roosevelt—This splendid Pea is of the same podded type as the Telephone but the pods are larger and the Peas sweeter. The Roosevelt Pea surpasses all other large-podded varities in productiveness. In other words a pint of Roosevelt Pea pods will yield as many shelled as a quart of most other sorts. Quality is always to be preferred to quantity, but a Pea which will give better quality and larger quantity is the Pea to plant. That Pea is the Roosevelt. A very popular variety. Height, 3 feet. 65 days. **Pkt., 5c; ½-lb., 20c; 1 lb., 35c; 2 lbs., 60c; 5 lbs., $1.25.**

PUMPKINS
For Delicious Pies

New Guinea Butter Bean

One of the Most Delicious of All Vegetables

The New Guinea Butter Bean is a wonderful vegetable. Grows to enormous size, one fruit often weighing 15 lbs., and from 3 to 5 feet long. In growth it is similar to the squash, and can be grown in the same manner or can be trellised up. It is more productive than squash and much easier to grow. The vines are always free from disease and insect pects, and stand more neglect and abuse than any other vegetable vine we know of. The fruits should be eaten when small, while the fuzzy growth is yet on. It can be cooked like squash and fried like egg plant. When cut up in small pieces and cooked with cream or fried it is most delicious. If trellised up the vines take up so little space, no garden is too small for at least two or three plants. **Pkt., 10c; 3 pkts. 25c; oz., 30c; ¼-lb., 85c.**

New Guinea Butter Bean

RHUBARB

Scand.—Rhabarber. **Ger.—Rhabarber**

(One ounce to 125 feet of drill—1 pound to acre)

Seed should be sown early in the Spring in shallow drills 1 foot apart; thin out to stand 4 to 5 inches apart in the row. The following Spring the roots should be transplanted into permanent beds and placed 3 feet apart each way; the year following that, or two years after sowing the seed, the Rhubarb may be used. Do not cut Rhubarb; pull it so that it comes out whole from the crown.

For forcing, take up some of the larger roots and plant in a dark corner of the cellar. Cultivate Rhubarb frequently, even after the cutting season is over, and top-dress with fertilizer in the Fall at least every other year.

SQUASH

Scand.—Squash-Graeskar

(One ounce to 25 hills—3 to 4 pounds to the acre)

There are two distinct types. The summer varieties are cultivated for the tender young fruits which are used in the green or growing stage during the Summer months. The Winter Squashes produce larger hard-shell fruits, which are gathered in the Fall before frost, and stored in a warm, dry place for Winter use. Be sure and leave part of the stem attached to the fruits.

Our Hardy Rocky Mountain Peonies

One of Our Peony Fields—Our Peonies Are Bred for Quality and Hardiness

CULTURE

Peonies may be planted either in the Fall or early Spring in Montana. Dig the soil deeply and cover the eyes or new buds to a depth of not more than three inches. Too deep planting causes poor growth and prevents blooming. Their chief requirements are good, rich soil and a sunny or partly shaded location. Give a liberal supply of water during growing season. Do not disturb extensively by cultivation.

WINTERING ROSES. After the first good heavy frost, bundle the branches together, cut them back to about 18 to 20 inches, mound earth around the plants up to 6 to 8 inches, or higher if practical, spread manure in the hollows between plants. Later on, when the ground is frozen, add a covering of leaves, straw, salt, hay or cornstalks to keep the ground frozen and as a protection against sun and wind. In the spring, remove covering a little at a time, first straw or leaves, then the coarse part of the manure, and finally level the soil when danger of hard spring frosts is past.

Climbers winter well if taken down from their support and laid flat on the ground where they can be covered with earth or heavy straw.

Rosa Rouletti

CULTURAL HINTS

WATERING. Roses like plenty of water. Flood the beds once a week by placing the hose on the bed and letting it run slowly so that water may reach deep to the roots. Avoid wetting the foliage, especially in the evening.

SPENT BLOOMS should be removed, cutting the stem above the first complete set of five leaves. If long-stemmed blooms are desired for cutting, remove old flowers so that two sets of leaves remain on the stalk. The next crop of blooms will spring from these eyes.

FERTILIZERS. No fertilizer of any nature should be applied the first year of planting. Roots are not yet in condition to consume it, and it may do a great deal of harm to young fibrous roots which have to be formed after transplanting. Later a "complete" fertilizer, such as Vigoro or Stim-U-Plant is preferable. Apply very lightly (a teaspoonful per plant) but often, and water liberally after each application.

HARDY RASPBERRIES

Latham—A large, dark red berry which has proven to be ideal for the Northwest. It is a hardy, vigorous grower, a heavy yielder, and a good keeper and shipper. It combines all the good qualities asked for in a Raspberry. **Price, 6 for 30c; 12 for 60c; 25 for $1.00.**

Chief—An offspring of Latham. It has all the disease resisting qualities of its parent. Its extreme hardiness and resistance to disease make it a robust grower and a heavy bearer. Chief ripens 10 to 12 days ahead of Latham, placing it on the market with the benefit of early high prices. Fine flavor and an excellent canner. The fruit is dark red, of good size and an excellent shipper. **Price, 6 for 35c; 12 for 60c; 25 for $1.00.**

St. Regis Everbearing—Known as the Everbearing Raspberry because of its long season. Berries large and a bright crimson; a prolific yielder and a fine, adaptable variety. **Per doz., 65c; 25 for $1.10.**

BLACK RASPBERRY

Gregg—Best of the black Raspberries, and a splendid yielder. The variety generally grown for market purposes. **Dozen, 75c; 25 for $1.35.** Large fruits and fine flavor.

WINTER PROTECTION FOR BLACKBERRIES

After the first freeze and when the plants are free of leaves throw a covering of coarse straw around the canes or lightly earth-up with soil.

"A BARREL OF GEMS"

In Your Back Yard or Even on the Back Porch

Grow these fine everbearing strawberries in a barrel. Fifty plants can be planted in a common sugar barrel, or even an old potato barrel. Bore two-inch holes in the side of the barrel and fill barrel with some good soil. Then set the plants in these holes, and 10 plants can be set on top. Keep well watered. Be sure to bore a few holes in the bottom for drainage. Barrel can be kept in the back yard or even on the back porch. This saves space and you can have berries for breakfast twice a week.

No weeds, no cultivation necessary. Keep runners pinched off. Just the thing for folks in town with less yardroom.
